Re: Advice Letter No. 51-O of SFPP, L.P. (PLC-9)

Dear ED Tariff Unit:

In accordance with the provisions of Section 455.3 of the California Public Utilities Code and General Order 96-B; Energy Industry Rule 8, SFPP, L.P. (“SFPP”) hereby submits its Advice Letter No. 51-0 increasing by ten percent its rates for the transportation of refined petroleum products on its intrastate pipeline system.

By this filing to be effective March 1, 2024, upon thirty days’ notice to its shippers, SFPP proposes to increase its system-wide, intrastate rates by 10 percent. The 10 percent increase that is the subject of this Advice Letter is expected to increase annual revenues by approximately \$12.6 million for the twelve-month period commencing March 1, 2024.

Attachment A hereto, the Declaration of Erik Wetmore, sets forth the analysis and supporting justification for the 10 percent increase that is the subject of Advice Letter No. 51-O.

Attachment B includes a list of the affected routes, including both the current rate and the proposed rate reflecting a 10% increase.

Attachment C contains revised tariff pages reflecting the proposed rate increase.

SFPP is providing a copy of this advice letter to its shippers of record (See Attachment D hereto) in accordance with the requirements of General Order No. 96-B. A copy of the required Tariff Summary Sheet is included in Attachment E.

Anyone party who wishes to protest this advice letter may do so by sending an e-mail not later than twenty days after the date of this filing to the ED Tariff Unit at: edtariffunit@cpuc.ca.gov. a letter not later than twenty days after the date of this filing.

Copies of the protest should also be sent via telefax or e-mail, with a hard copy to follow to:

SFPP, L.P.
Mr. Bruce Reed
1001 Louisiana Street, Suite 1000

Attachment A

DECLARATION OF ERIK WETMORE

DECLARATION OF ERIK G. WETMORE

I, Erik G Wetmore, declare as follows:

1. I am a Principal in the consulting firm Turner Wetmore Collins, LLC, a firm that provides consulting services to the regulated sector of the energy transportation industry.
2. I have thirty-five years of professional experience, primarily in advising companies on ratemaking, financial, accounting, economic, and contract interpretation issues. My experience includes filing expert testimony in cost-of-service proceedings before the California Public Utilities Commission (“Commission” or “CPUC”), the Federal Energy Regulatory Commission (“FERC”), and various other regulatory commissions and courts. I received an M.B.A., with concentrations in Finance and Economics, from the University of Chicago Booth School of Business, and a B.A. in Mathematics and Economics from the University of California at Santa Barbara. I also earned a Certified Public Accountant license in the State of California.
3. I have provided testimony on behalf of SFPP, L.P. (“SFPP”), both before this Commission and before the FERC, on multiple occasions.
4. SFPP’s counsel requested that I develop SFPP’s CPUC-jurisdictional 2024 test year (“2024 TY”) cost of service, and the results of the requested analysis are presented in Attachment A that is attached to this declaration. Attachment A includes four pages: page 1 presents SFPP’s 2024 TY cost of service; page 2 presents SFPP’s achieved return results before and after SFPP’s proposed tariff rate increase that is the subject of this application; and pages 3 and 4 summarize SFPP’s rate base and operating expenses, respectively. In order to develop SFPP’s 2024 TY cost of

service, I used a 12-month base period from December 1, 2022 through November 30, 2023—the most current data available. With respect to rate base, I included all property placed into service as of November 30, 2023. For the cost of capital elements (*i.e.*, capital structure, cost of debt, and the nominal equity rate of return), I relied on Dr. Michael J. Webb, whose recommendations are presented on page 1, lines 13 through 16, of Attachment A.

5. The purpose of my declaration is to summarize my development of SFPP’s 2024 TY cost of service. First, I review how I determined the portion of SFPP’s property and operating expense amounts that are attributable to CPUC intrastate service. For those costs that are incurred solely for CPUC intrastate service, that determination is straightforward. However, for costs incurred at SFPP facilities that provide both CPUC intrastate and FERC interstate transportation services (“joint-use” facilities), I have to separate those costs between the two jurisdictions. Second, I discuss the development of SFPP’s 2024 TY rate base. Third, I address test period adjustments that were necessary to develop the appropriate level of operating expense to include in SFPP’s 2024 TY cost of service. Finally, I address the development of SFPP’s 2024 TY cost of service, volumes, and revenues.
6. To determine the CPUC intrastate portion of property and operating expense amounts at joint-use SFPP facilities, I developed a “Volumetric Route Directory.” The Volumetric Route Directory calculates the percentage of CPUC intrastate-versus FERC interstate-destined volumes that are transported through or offloaded at each delivery point along the joint-use facilities. These percentages are then applied to the property and operating expense amounts of each respective facility.

This is the same approach that I used to develop SFPP's 2021 Test Year cost of service in Docket No. A.21-01-015 and 2023 Test Year cost of service in Docket No. A.23-01-015. This is also the same approach that I have used to develop SFPP's cost of service in FERC rate proceedings.

7. To calculate rate base, I utilized the Depreciated Original Cost ("DOC") rate base methodology. Total DOC rate base consists of net carrier property in service, adjusted for an Allowance for Funds Used During Construction ("AFUDC") and working capital. In light of the Commission's determination in Decision No. 11-05-045 to deny inclusion of an income tax allowance in SFPP's cost of service, I conservatively have not included an income tax allowance in SFPP's 2024 TY cost of service and have correspondingly not adjusted SFPP's CPUC intrastate rate base for Accumulated Deferred Income Taxes (or ADIT). SFPP's rate base is summarized on page 3 of Attachment A. This is the same rate base methodology that I used to develop SFPP's 2021 Test Year cost of service in A.21-01-015 and 2023 Test Year cost of service in Docket No. A.23-01-015.
8. To calculate SFPP's CPUC intrastate net carrier property in service, which is carrier property in service *less* accrued depreciation, I relied on detailed property data provided by SFPP, which includes total company historical carrier property in service records through November 30, 2023, in an electronic database format. This property data reflects the original cost of the property when initially placed in service. I applied the separation and allocation factors to these property amounts to calculate CPUC intrastate carrier property in service.

9. To calculate annual depreciation expense, I multiplied the average annual carrier property balance, by FERC account, by the applicable depreciation rates per SFPP's books and records. I accumulated the resulting annual depreciation expense by year. For retirements, I adjusted the annual accumulated depreciation expense balance for the original cost of the asset retired in the year the asset was retired, adjusted for cost of removal. For transfers, I calculated the cumulative depreciation expense up to the transaction year for the transfer and added (for transfers in) or subtracted (for transfers out) the resulting cumulative annual depreciation expense to or from the annual accrued depreciation balance.
10. AFUDC compensates investors for funds expended to construct or purchase pipeline assets before the assets are placed in service. I calculated AFUDC based upon SFPP's annual additions of CPUC intrastate carrier property in service, assuming capital projects are completed and placed in service evenly throughout the year. The cumulative balance of AFUDC is depreciated based upon SFPP's composite depreciation rate. Additionally, I removed any capitalized interest during construction.
11. Working capital consists of investments and prepayments required to support the ongoing operation of a pipeline. Specifically, for oil pipelines, working capital reflects the sum of the balances for oil inventory, materials and supplies, and prepayments. I allocated SFPP's total company working capital amounts to SFPP's CPUC intrastate system based upon the ratio of CPUC intrastate carrier property in service to total company property in service.
12. I did not make any test year adjustments to rate base in the 2024 TY cost of service.

13. To develop the amount of operating expenses to include in the 2024 TY cost of service, as such amount is shown on page 4 of Attachment A, I started with SFPP's actual operating expenses that were recorded in the base period (December 2022 through November 2023). As discussed above, I applied the separation and allocation factors to these operating expense amounts, where applicable, to calculate SFPP's CPUC intrastate operating expenses.
14. I also made several test period adjustments to the base period operating expenses so that the 2024 TY cost of service captures the appropriate level of operating expenses SFPP reasonably anticipates to incur during the period in which the requested rates would be in place. First, I included cash expenditures charged against a reserve during the base period and eliminated the corresponding reserve accruals recorded in the base period. Second, I adjusted the base period amount of salaries and wages expense to reflect a forecasted 4% increase in compensation. Third, I normalized the amount of integrity management expense by replacing the base period amount of integrity management expense with the average of integrity management expense for the five-year period of 2019 through 2023. Fourth, I adjusted the base period amount of environmental remediation cash expenditures for known and measurable changes expected to occur in the foreseeable future. Fifth, I adjusted the base period amount of fuel and power expense to reflect a forecasted 5% increase in underlying power costs. Sixth, I normalized the amount of oil losses and shortages expense by replacing the base period amount of oil losses and shortages expense with the average oil losses and shortages expense for the

- five-year period of 2019 through 2023. Seventh, I included forecasted CPUC rate case expense amortized over five years.
15. My calculation of SFPP's 2024 TY cost of service is set forth on page 1 of Attachment A. SFPP's 2024 TY cost of service is comprised of total return on rate base (line 3), operating expenses (line 5), depreciation expense (line 6) and AFUDC amortization expense (line 7). As shown on page 1, lines 1 through 3, of Attachment A, total return on rate base is calculated by multiplying SFPP's total rate base by its weighted cost of capital. I developed SFPP's weighted cost of capital by adding the equity rate of return to the debt cost, each weighted by the respective equity/debt capital structure, as provided by Dr. Webb. As shown on page 1, line 9, of Attachment A, SFPP's 2024 TY cost of service is \$149.3 million.
 16. To develop 2024 TY volumes, I used SFPP's actual base period volumes by destination, which totaled 226.1 million barrels. To calculate 2024 TY revenues, I multiplied SFPP's 2024 TY volumes by its existing rates (as shown on page 1, line 10, of Attachment A) and its proposed rates (as shown on page 1, line 12, of Attachment A).
 17. My calculation of SFPP's achieved overall return for the 2024 TY, both before and after SFPP's proposed rate increase, is set forth on page 2 of Attachment A. As shown on page 2, line 12, of Attachment A, assuming its existing rates, SFPP's overall achieved return is 1.41%, and as shown on line 13, SFPP's achieved return on equity is negative 1.21%. As shown on line 12, after applying SFPP's proposed 18.663% rate increase equally to each rate, SFPP's overall achieved return is 10.04%, and as shown on line 13, SFPP's achieved return on equity is 13.18%.

The foregoing declaration is submitted under penalty of perjury in accordance with the laws of the State of California.

Dated: January 30, 2024

ADVICE LETTER SUMMARY SHEET

ADVICE LETTER SUMMARY

ENERGY UTILITY

MUST BE COMPLETED BY UTILITY (Attach additional pages as needed)

Company name/CPUC Utility No.:

Utility type:

ELC GAS WATER
 PLC HEAT

Contact Person:

Phone #:
E-mail:
E-mail Disposition Notice to:

EXPLANATION OF UTILITY TYPE

ELC = Electric GAS = Gas WATER = Water
PLC = Pipeline HEAT = Heat

(Date Submitted / Received Stamp by CPUC)

Advice Letter (AL) #:

Tier Designation:

Subject of AL:

Keywords (choose from CPUC listing):

AL Type: Monthly Quarterly Annual One-Time Other:

If AL submitted in compliance with a Commission order, indicate relevant Decision/Resolution #:

Does AL replace a withdrawn or rejected AL? If so, identify the prior AL:

Summarize differences between the AL and the prior withdrawn or rejected AL:

Confidential treatment requested? Yes No

If yes, specification of confidential information:

Confidential information will be made available to appropriate parties who execute a nondisclosure agreement. Name and contact information to request nondisclosure agreement/ access to confidential information:

Resolution required? Yes No

Requested effective date:

No. of tariff sheets:

Estimated system annual revenue effect (%):

Estimated system average rate effect (%):

When rates are affected by AL, include attachment in AL showing average rate effects on customer classes (residential, small commercial, large C/I, agricultural, lighting).

Tariff schedules affected:

Service affected and changes proposed¹:

Pending advice letters that revise the same tariff sheets:

¹Discuss in AL if more space is needed.

Protests and all other correspondence regarding this AL are due no later than 20 days after the date of this submittal, unless otherwise authorized by the Commission, and shall be sent to:

CPUC, Energy Division
